12 3 rna and protein synthesis answers The chemical structure of RNA is very similar to that of DNA, but differs in three primary ways: . Unlike double-stranded DNA, RNA is a single-stranded molecule in many of its biological roles and consists of a much shorter chain of nucleotides. However, RNA can, by complementary base pairing, form intrastrand (i.e., single-strand) double helices, as in tRNA.

12 3 rna and protein synthesis answers Ribosomal ribonucleic acid (rRNA) is the RNA component of the ribosome, and is essential for protein synthesis in all living organisms. It constitutes the predominant material within the ribosome, which is approximately 60% rRNA and 40% protein by weight, or 3/5 of ribosome mass.

12 3 rna and protein synthesis answers The compendium of RNA-binding proteins (RBPs) has been greatly expanded by the development of RNA-interactome capture (RIC). However, it remained unknown if the complement of RBPs changes in response to environmental perturbations and whether these rearrangements are important.

12 3 rna and protein synthesis answers Let us begin by considering the nature of the nucleotide, the fundamental building block of DNA. The nucleotide consists of a phosphate joined to a sugar, known as 2-deoxyribose, to which a base is attached. The phosphate and the sugar have the structures shown in Figure 6-2.

12 3 rna and protein synthesis answers Interpretive Information: A "detected" result supports the diagnosis of HIV-1 infection. A "detected" result in combination with a negative antibody test result is consistent with acute or primary infection; this diagnosis should be confirmed by verifying seroconversion over the next 3 to 6 months. 4,7 A "not detected" result is consistent with the absence of HIV-1 infection.

12 3 rna and protein synthesis answers Zika virus, an arthropod-borne flavivirus pathogen in humans, is unusual because it can be sexually transmitted and can be shed for prolonged periods in semen. We report viral shedding in vaginal secretions for up to 6 months, indicating the potential for sexual and vertical transmission by infected women.
