decreased activity of the antioxidant heme oxygenase enzyme implications in ischemia and in alzheimer s disease Americans have become less physically active overall between 1955 and 2005. While the rate of leisure-time physical activity has not changed significantly there has been a decrease in work-related activity, human powered transportation, activity in the home, and increasing sedentary lifestyle. During 2000 and 2005 the number of adults who were never physically active increased from 9.4% to 10 ...
