on the explicit formulations of circular tube bar and shell of cylindrically piezoelectric material under pressuring loading The mathematical formulations of quantum mechanics are those mathematical formalisms that permit a rigorous description of quantum mechanics. Such are distinguished from mathematical formalisms for theories developed prior to the early 1900s by the use of abstract mathematical structures, such as infinite-dimensional Hilbert spaces and operators on these spaces.

The outline of the paper is as follows. The general concept of Kriging interpolation is briefly explained in Section 2. Section 3 defines the considered optimization problems. The method employed in this work to solve the optimization problems and its algorithmic implementation is described in Section 4. Section 5 includes two case studies. The first case study consists of two parts.
