progress in biomass conversion volume 1 A wide spectrum of organic substances, contained in the pyrolytic liquid fractions, is given in Table 3. The liquid fraction of the pyrolysis products consists of two phases: an aqueous phase containing a wide variety of organo-oxygen compounds of LMW and a non-aqueous phase containing insoluble organics (mainly aromatics) of high molecular weight .

progress in biomass conversion volume 1 49 Biomass Conversion Technologies â€¢ Straight vegetable Oil (SvO)/Pure Plant Oil (PPO): SVP/PPO can be used in most modern diesel vehicle engines only after some technical modifications. Principally, the viscosity of the SVO/PPO must be reduced by preheating it.

progress in biomass conversion volume 1 Unlike petroleum, biomass composition is not homogeneous, because the biomass feedstock might be made of grains, wood, grass, biological waste and so on, and the elemental composition is a mixture of C, H and O (plus other minor components such as N, S and other mineral compounds).

progress in biomass conversion volume 1 Algae fuel, algal biofuel, or algal oil is an alternative to liquid fossil fuels that uses algae as its source of energy-rich oils. Also, algae fuels are an alternative to commonly known biofuel sources, such as corn and sugarcane. Several companies and government agencies are funding efforts to reduce capital and operating costs and make algae fuel production commercially viable.

Algae fuel - Wikipedia

progress in biomass conversion volume 1 A biofuel is a fuel that is produced through contemporary biological processes, such as agriculture and anaerobic digestion, rather than a fuel produced by geological processes such as those involved in the formation of fossil fuels, such as coal and petroleum, from prehistoric biological matter. If the source biomatter can regrow quickly, the resulting fuel is said to be a form of renewable ...

progress in biomass conversion volume 1 Most renewable energy is derived directly or indirectly from the sun. Sunlight can be captured directly using solar technologies. The sun's heat drives winds, whose energy is captured with turbines. Plants also rely on the sun to grow and their stored energy can be utilized for bioenergy. Types of Renewable Energy.
