sensitive determination of 8 chloroadenosine 3 5 monophosphate and 8 chloroadenosine in plasma by high performance liquid chromatography The preparative IEF was described previously [ , , ].Cellulose-based separation medium (0.8 mL) prepared according to Ref. [ ] and 30  $\hat{1}\frac{1}{4}$ L of the pl marker solution were uniformly poured into a V-shaped plastic trough which was placed on the power source [ ] and fixed in its position by electrodes. Then 100 or 200  $\hat{1}\frac{1}{4}$ L of the sample solution were loaded into the central third of the trough.

sensitive determination of 8 chloroadenosine 3 5 monophosphate and 8 chloroadenosine in plasma by high performance liquid chromatography An explosive (or explosive material) is a reactive substance that contains a great amount of potential energy that can produce an explosion if released suddenly, usually accompanied by the production of light, heat, sound, and pressure. An explosive charge is a measured quantity of explosive material, which may be composed of a single ingredient or a combination of two or more.
